NUS Co-Operative Education Programme
a work-study scheme with three internships

About
The NUS Co-Operative Education Programme (Co-Op) is a one-of-a-kind programme that formally integrates academic studies with relevant work experience. In Co-Op, you will be attached to a company where you will complete three industrial attachment stints, totalling 64 weeks (about 16 months) in duration, over your 4-year candidature at NUS. You can look forward to applying what you learn in university to real-world issues and receiving an innovative university education that seamlessly weaves work and study together.

Highlights
- Solid, hands-on industry experience even before graduation
- Immediate application of concepts, theories and skills learnt in classes
- Exposure to how a company operates in practice
- Development of an early and enduring relationship with the company
- A head start on your career

Above all, with careful planning, you can still graduate in four years.

[If you are considering additional programmes such as the Student Exchange Programme (SEP), NUS Overseas Colleges (NOC) Programme and Double Degree Programme (DDP), you will need to extend your university candidature beyond 4 years, at additional cost.]

What companies will I work with?
You will work with renowned global and local organisations and government-related agencies across various industry sectors such as IT, finance, telecommunications and the civil service. Together with the world-class educational experience that you will receive in NUS, you will also enjoy a carefully crafted and rewarding work-study experience with Co-Op.

How do I apply?
From this academic year (2017-18), you may apply to Co-Op if you are pursuing either the Bachelor of Science (Business Analytics) or Bachelor of Computing (Information Security) degree programme.

You will be considered for this programme after you have accepted your Business Analytics or Information Security degree programme offer.

After you successfully register for the programme, you will be provisionally enrolled and will follow the recommended Co-Op academic syllabus and schedule of the respective degree programmes. You will apply to your chosen companies for internship placements by the second semester of Year 1. If you are shortlisted, employers will interview you and make an offer through the School. You will be formally admitted into Co-Op only after you have been matched with a company.
